

Before you go...

A [NanoFASE](#) Bulletin highlighting short interviews and science updates. Read and relax before you leave the office/lab for a well-deserved end-of-year break!

Quick Navigation:

1. [Insights from Industry](#)
2. [A profitable visit to Helsinki](#)
3. [Never losing sight](#)
4. [A question of scale and perspective \(on the way to 2018\)](#)

Insights from Industry

[A word from the wise](#): NanoFASE Advisory Board Member Sir Peter Dobson knows what it's like on every side of the nanomaterials equation.

Dr Selina Tang (Promethean) and Dr Marta Santiago (Hempel) tested the NanoFASE Clickable Framework for just a few minutes and immediately saw how this tool could [facilitate communication with their own stakeholders](#). (Oct. 2017)

[Give it a click - Join our Hands-On Stakeholder Consultation](#)

[A profitable visit to Helsinki](#)

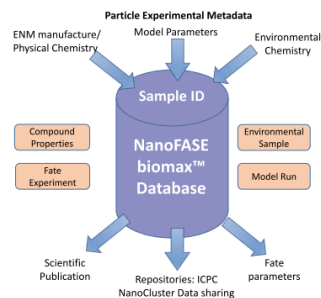

A new and important chapter in our ongoing engagement with ECHA: [conversations at](#)

[NMEG-10 about NanoFASE exposure modelling tools](#), and how our science can nourish the nanomaterials regulatory process and REACH guidelines.

This short update highlights regulators' priorities and perceptions as well as the good advice we got. (Nov. 2017)

[Never losing sight](#)

[NanoFASE uses BIOMAX as a centralized platform](#) to trace which particles are being used in which experiments. WP3 (ENM Supply, Transformation and Metrology) collaborates with the empirical work packages to capture the great diversity of distinct information produced by our complex multimedia studies and needed for the NanoFASE modelling tools. (Nov. 2017)

Remember, with particles as with other things, it's all a question of scale and perspective.
